vr-on wins the Innovation Award “Innovationspreis-IT 2018”

Munich / Herrsching, May 2, 2018: The vr-on GmbH, www.vr-on.com, is continuing its road to success! The innovative company, which was founded in 2016 and is growing steadily, has won the Innovation Award [Innovationspreis-IT](#) in the category “Server / Virtualization”.

The prize has been awarded annually for the past 15 years by the Huber Verlag for New Media and the “Initiative Mittelstand” with the goal of promoting innovation in the SME sector. vr-on convinced the jury with its Virtual Reality solution. The nearly 100 people strong, independent jury team, consisting of scientists, journalists and IT industry experts agreed: With STAGE, vr-on offers a solution that outperforms all competitors.

The virtual reality collaboration platform STAGE was developed for B2B use and brings together employees from different locations in the virtual world. Teams can coordinate their product designs in various stages of development in virtual space, make decisions and document them directly in the system. Lengthy, iterative processes are thereby simplified and accelerated. Building costs for real prototypes and travel expenses for teams can be significantly reduced using STAGE and the time to market can be dramatically shortened. Other use cases are product evaluations, layout plannings - from interior design to factory planning - as well as virtual training courses.

Mathias Wochmig, CEO and Co-Founder, was happy to have received the award: "The award is a reward for the work of recent years and helps us to further establish ourselves as a start-up, to get our name out there and to raise awareness of the entire VR / AR topic in the business sector".

About vr-on:

The vr-on GmbH, www.vr-on.com, aims at establishing innovative methods for using virtual reality in the B2B area while using current consumer hardware. With the STAGE software, a virtual reality collaboration platform for industrial customers has been developed.

The founders of vr-on have been involved with Virtual Reality for many years and have a wealth of experience in the field of automotive and aerospace applications. Vr-on uses this know-how for its customers to introduce innovative methods for VR in the context of the current consumer hardware (for example virtual reality headsets such as [Oculus Rift](#) or [HTC Vive](#)) and to develop existing methods on new platforms.
